Yassine Chettouch

Product Engineer | Shipping SaaS AI & Complex Systems
Rabat, Rabat-Salé-Kénitra, Morocco

Summary

Product Engineer focused on high-complexity system architecture.

I build proprietary engines and revenue-critical software.

Core Engineering Focus:
• High-Complexity System Design (Data, State, Failure Modes)
• Revenue-Critical & Financial Systems (Ledgers, Billing)
• AI-Enabled Pipelines (Vision, OCR, RAG)
• Event-Driven Architecture (Durable Execution & Reliability)

I am technology-agnostic. I deploy the optimal stack for the problem —whether it is Next.js, Python, or SQL.

I take ownership from architecture to deployment. No hand-holding required.

Open for:
• Technical Leadership (Fractional CTO / Lead)
• High-Impact Engineering Contracts (Remote)

Experience

Verto
Lead Product Engineer
November 2025 - Present (3 months)
Rabat, Rabat-Salé-Kénitra, Morocco

Architecting a proprietary AI-powered translation engine designed for high-volume document pipelines.

- Engineered a "Visual Compiler" using Next.js 16 and OpenAI Vision to reconstruct scanned PDFs into native Google Docs with 99% layout fidelity.
- Built a Durable Execution pipeline using Trigger.dev to handle long-running processes (50+ page legal documents) without timeouts.

- Implemented a Double-Entry Ledger system in PostgreSQL to ensure financial accuracy for credit consumption and billing.
- Developed a custom split-screen editor using Tiptap and React for side-by-side document verification.

Confidential
Senior Full Stack Engineer
November 2022 - October 2025 (3 years)
Rabat, Rabat-Salé-Kénitra, Morocco

Built the core Cloud ERP for a high-volume International Agency. Scaled the platform from a simple MVP to a complex Enterprise system handling thousands of users and financial transactions.

KEY ENGINES DELIVERED:

- Automated Document Pipeline (IDOS): Engineered a workflow using OpenAI API and OCR to extract data from user ID documents and auto-fill DB records, reducing manual entry by 90%.

- Vector Search Engine (Project Phoenix): Built a high-performance RAG system using Meilisearch and OpenAI Embeddings to match customer profiles with catalog data in milliseconds.

- Financial Infrastructure: Built a custom Billing & Commission Engine. Integrated Local Payment Gateways and real-time WebSockets for sales analytics.

STACK: Laravel 11, Livewire, React, MySQL, Redis, Meilisearch, AWS S3.

Orenzo Digital
Co-Founder & Lead Product Engineer
December 2022 - May 2023 (6 months)
Rabat, Rabat-Salé-Kénitra, Morocco

• Co-founded Orenzo Digital, a digital agency, overseeing technical and creative execution from inception.
• Sole engineer responsible for building the agency's entire web infrastructure and internal tools.
• Designed the complete visual identity, including logo, UI/UX, and marketing collateral, enhancing brand presence.

• Managed client delivery and led an engineering team to deliver full-stack software solutions for international clients.

Education

Ecole Supérieure de Technologie Kénitra

Bachelor of Science - BS, Data Engineering & Artificial Intelligence · (2025)

Specialized Institute of Applied Technologies NTIC (ICT) Rabat

Specialized Technician, Full Stack Web Development · (October 2021 - July 2023)

Hassan II High School - Sala Al Jadida

Baccalaureate, Physical Sciences · (September 2018 - June 2021)
